Languages

- English (IELTS Band Score- 7)
- Bengali (Native)

Recent Projects

1. Auto Trader booking service web application

Application Source:

<https://nihonchukosha.onrender.com>

Source-code:

Client: <https://github.com/Aminur-Rahman-Kanon/ncs-client>

Server: <https://github.com/Aminur-Rahman-Kanon/ncs-server>

Technology used:

A single-page semi-commerce MERN stack web application using Reactjs, Redux, Nodejs (Express), MongoDB, Firebase Storage, Firebase Database, and Email.js. This application is hosted on the render with a CICD pipeline connected to my GitHub repository.

2. Phone repair service booking web application

Application Source:

<https://phoneclinic.onrender.com>

Source-code:

Client: <https://github.com/Aminur-Rahman-Kanon/phone-Clinic-Client>

Server: <https://github.com/Aminur-Rahman-Kanon/phone-clinic-server>

Technology used:

A MERN stack semi-commerce web application using Reactjs, Nodejs (Express), MongoDB and Emailjs, and some third-party React Components. This application is hosted on the render with a CICD pipeline connected to my GitHub repository.

3. Bike repair booking service web application

Application Source:

<https://cyclefix.onrender.com>

Source-code:

Client: <https://github.com/Aminur-Rahman-Kanon/cycleFixClient>

Server: <https://github.com/Aminur-Rahman-Kanon/cycleFixServer>

Technology used:

A MERN stack web application using Reactjs, Nodejs (Express), MongoDB, Stripe payment, nodemailer, google login, view-engine(EJS), JWT and some third-party React Components. This application is hosted on the render with a CICD pipeline connected to my GitHub repository.

4. E-Commerce web application

Application Source:

<https://karkhana.onrender.com>

Source-code:

Client: <https://github.com/Aminur-Rahman-Kanon/karkhana-client>

Server: <https://github.com/Aminur-Rahman-Kanon/karkhana-server>

Technology used:

A MERN stack web application using Reactjs, Nodejs (Express), MongoDB, Stripe payment, firebase-storage, view-engine(EJS), JWT and some third-party React Components. This application is hosted on the render with a CICD pipeline connected to my GitHub repository.
